

Disruptive Technologies Lab

Team: Gabriella Kinsella, Anay Khanderia, Ishaan Chatur, Krish Patel, Preyasi Gaur, Kanika Gupta, Lukas Brockenborough, Shantanu Sinha

Idea: We are preserving archaic progress on generationally sound inventions that can benefit from some finetuning for the next wave of data collection. As data becomes a more integral part of our lives, and of our very definition of "finding oneself", we aim to globalize the flow of information towards all possible parties we can reach out to. The technologies built in this lab serve the purpose of diversifying and equalizing the amount of information and platform on which this information is served.

Investment Strategy: By hybridizing our holdings company, we aim to generate cash flows through new-age investment techniques which are sourced, developed and refined in-house, by our venture capitalists and engine-team members. External investors only have the option to invest in an ongoing project hosted by our incubator in the Disruptive Technologies Lab after they have made a proportionally sized investment in our asset-management company. By providing alternative routes of investment, we are urging our investors to invest directly in the future by providing liquidated financing to ventures that could be served best by immediate financing.

Project Guidelines:

- Each of our projects must be incubated in-house, and with some stake provided to the Disruptive Technologies Lab.
- Each existing project will only be financed after thorough investigation into the motives of the project, and the future potential of the project.
- Projects must utilize a chaos-resistant growth strategy
